

**The Power of Sound
in the service
of health and well-being.**

The power of sound in the pain care.

What is MAM®

The Acoustic Muscle Modulator is a patented device for the treatment of pain using a special acoustic wave modulated in power and frequency. It is equipped with a cylindrical plastic probe of about three cm in diameter which is positioned on the surface of the skin at the regions painful to treat. The beam emitted by the MAM® waves through the tissues and releases the muscle contractions that cause pain, leading to the disappearance or the reduction of pain within a few seconds.

For whom the MAM® treatment is used

The MAM® treatment is used for the management of all types of acute or chronic pain such as arthritic, rheumatic, myalgic, traumatic or post-operative pain. Excellent results are obtained in headaches and dizziness with applications of the MAM® sound at the cervical, occipital

and neck level. Remarkable results are obtained in patients with chronic venous insufficiency (varicose veins) and also in claudication arteriopathy. the MAM® treatment neither includes the administration

of drugs nor the flow of electricity, so it can be run in patients bearing a pacemaker and in patients receiving hemodialysis.

The treatment is also suitable for those who did not get benefits after treatment with traditional medications (analgesics, anti-inflammatories, steroids, muscle relaxants) with common treatments of physiotherapy, manipulation, infiltration and / or surgery.

A painless method

The method is non-invasive and very quick. The MAM® treatment, in fact, allows for the reduction or disappearance of pain with immediate recovery of the lost function.

Its characteristics give it the ability to be able to simply and specifically deal with all areas of the human body including the less accessible ones, such as: the subscapularis, the subcostal, the obturator, the pelvic and popliteal area.

The MAM® application

The cylindrical probe of the device is positioned on the skin without any means of contact such as oil, water or gel. A pedal

sends the MAM® wave beam for eight seconds on the

painful spot to be treated, which is identified by the MAM® pain map.

Four sessions

The MAM® treatment requires in most cases only four sessions (one session a week).

The sessions can also be performed at the patient's home.

Benefits

After the first session you have the reduction or disappearance of pain.

The obtained elimination of pain is conclusive and lasts through time.

The pain elimination restores a state of mental well-being that allows the person to return to practice a proper motor activity, which is essential to the improvement of physical fitness and quality of life.

The power of sound in the treatment of fluid retention.

What is the Dreno-MAM®

The Dreno-MAM® is a massage for tissue drainage which is practiced with an application of the MAM® device made up of eight small cups.

The "Dreno-MAM® massage" penetrates deeply into the tissues using the special acoustic wave produced by the MAM® device

For whom it is used

Dreno-MAM® is indicated in those individuals who suffer from water retention, with hands, feet, ankles or legs swollen permanently or at certain times of their lives such as in the premenstrual period, after long travels, prolonged standing position, in summer in overheated environments, after imbalanced diets, interventions, hormone therapy, stay at high altitude. In those patients with sore legs after long periods of prolonged physical activity, such as a visit to an art city, or prolonged periods of work or stationary standing or sitting. In those patients with varicose veins or congestion of the micro-circulation in the purple or marbled legs.

Application

The Dreno-MAM® massage is the implementation of eight cylindrical cups, first in the posterior region and then in the front region of the body. Through these cups the MAM® sound is transferred to the underlying tissue with beneficial draining effects. On average, the session lasts thirty minutes and three areas of the body are soundproofed.

How it works

The MAM® Sound acts producing a massage of the lymph node drainage of tissue fluids in the lower

limbs. The effect is the decongestion of the lymphatic system and an improvement of micro-circulation.

Ten sessions: the benefits

The cycle of Dreno-MAM® sessions determines in most of the subjects, after the first session, a considerable improvement of the sense of weight and tenderness of the lower limbs.

After four sessions there is frequently an objective reduction in volume of the limbs. At the end of the cycle, also the micro-circle disorders show significant improvements with the heating of the extremities and changes in skin color.

The advantages of MAM®

- Two devices in one.
- Effective and easy to use.
- Not operator dependent (short learning curve).
- Painless and non-invasive.
- Not allergenic (does not use gel or oil contact).
- Practical as effective even through clothing.
- Short duration of the session, about 15 minutes for the MAM® and 30 minutes for the Dreno-MAM®.
- Doctors, nurses, physiotherapists, chiropractors, osteopaths and even beauticians can use the device.
